Over the last twenty years or so, the Internet has grown from a simple network of simple networks, to a global network of information. Nowadays, information is accessible on the Internet from every corner of the world. The number of individuals which make use of the Internet has reached a level at which the individual's need for privacy has grown larger than ever. The term, "Internet privacy" has taken on a much more comprehensive meaning that it did even a year ago. In the beginning, only individuals had access to the Internet. The Internet was, and remains, free of charge. Also, no data was transmitted over the Internet. As a result, the amount of data which could be transmitted over the Internet was extremely limited. Individuals used the Internet to communicate with other individuals. These individuals were either a specific small number of individuals, or a few hundred individuals, or a small number of thousands of individuals. As the Internet began to grow, the number of individuals accessing the Internet began to grow rapidly. The number of individuals using the Internet began to grow rapidly. It was not long before the number of individuals using the Internet increased exponentially. Naturally, the amount of information available on the Internet has also increased exponentially. Both the number of individuals accessing the Internet and the amount of data available on the Internet has continued to grow rapidly. Today, the number of individuals using the Internet, and the amount of information available on the Internet, continue to grow at an extremely rapid rate. Today, information is communicated over the Internet using complex technology. Further, Internet data has become indispensable in everyday life. For example, using the Internet, a person may retrieve information from a web site. The retrieved information may be used, for example, for reading, for example, an article from a newspaper. Many privacy breaches have already taken place in the past, and privacy breaches are continuing to occur even today. For example, there are several web sites which store information such as credit card numbers, bank account numbers, personal contact numbers, social security numbers, and the like. There are also web sites which store information such as a person's travel data, fitness data, medical data, and so forth. This information may include personal data such as a person 570a42141b
