Field of the Invention The present invention relates to a phase change memory, and more particularly, to a phase change memory cell and method of programming and sensing the state of the cell. 2. Description of the Related Art Phase change memory (PCM) is a non-volatile memory technology that exploits the properties of certain materials to form a non-volatile memory. For instance, chalcogenide materials may be used to form a PCM memory cell. Chalcogenide materials exhibit a relatively stable and detectable state. A stable state may be defined as a state in which a phase change material in the chalcogenide material is in a particular structural phase. The state may be changed to a detectable state by providing an amount of energy to the chalcogenide material. The amount of energy provided to the chalcogenide material is sufficient to change the state of the material from one phase to another phase. The amount of energy is sufficient to bring a chalcogenide material into a detectable state, but is insufficient to cause physical or chemical damage to the chalcogenide material. Thus, if a sufficient amount of energy is provided to a chalcogenide material, the phase of the material is changed and the material changes from the detectable state to a stable state a1d647c40b

Q: Windows Store App that makes use of an existing Windows Runtime Component? I have been tasked with creating a Windows Store App that makes use of a Windows Runtime Component. I have never created a Windows Runtime Component before but am fairly confident that it is fairly straightforward. I can only see information regarding how to create a Windows Runtime Component on their page about Windows Runtime Components. Can anyone please let me know if this is achievable. Thanks in advance A: It is definitely achievable, all you need to do is create a Windows Runtime Component project with the template for the specific Runtime Component you want to use, e.g. an XAML control. I have successfully done this. An Alaskan couple who nearly lost their right to a baby boy after they got pregnant without the benefit of fertility treatment are celebrating the birth of their son. Brady Jensen was born on Jan. 4, 2014, weighing 7 pounds, 13 ounces. Brady's mother, Kristina Jensen, said she was so excited when she felt the baby kick for the first time. "We feel like we were given a gift with Brady and that it was meant to be," Kristina Jensen said. The Jensen's aren't the first to celebrate the birth of a baby conceived naturally. In December, a Michigan couple was similarly surprised to learn that their daughter, Grace, was conceived without any help from fertility doctors.
